

Disposing Liquid Biohazardous Waste Using the Sanitary Sewer Drain

Standard Operating Procedure

Revision Date: 06/13/18

Use this procedure for liquid biohazardous waste that will **not** clog sanitary sewer drains.

NOTE: This waste stream **must** be treated within 60 days of the accumulation start date.

When NOT to Use this Procedure

Do **not** use this procedure if the liquid biohazardous waste:

- Could potentially clog the sanitary drain, then follow the procedure [Preparing Liquid Biohazardous Waste for Collection](#).
- Is mixed with chemicals, then refer to the document [Helpful Hints for Preparing Chemical Waste for Collection](#).

Supplies Available through Environment, Health & Safety

Environment, Health & Safety (EHS) provides the BIOHAZARD labels. To order labels, call EHS at (734) 647-1143.

SUPPLY	DESCRIPTION
	The "BIOHAZARD" symbol must be on the waste containers.

Disinfectants

Use one of the following disinfectants:

- 1:10 dilution of household bleach (contains 5% sodium or calcium hypochlorite) to water
- Suitable commercial disinfectant for the agent in use.

NOTE: Departments are responsible for purchasing bleach or commercial disinfectants.

Procedure: Disposing Liquid Biohazardous Waste Using the Sanitary Sewer Drain

1. Treat the waste in disinfectant using one of the following methods:
 - 1:10 dilution of household bleach for at least 30 minutes
 - Commercial disinfectant following manufacturer's instructions for appropriate concentration and contact time.
2. Rinse the treated material down the sanitary sewer drain.
